Rain Barrels are placed under the gutter's downspout to collect rain water from the roof. The barrel holds about 50 gallons for watering your garden. Rain water harvesting helps save money on your water bill and reduces flooding in local rivers and streams.

Please join for no cost if you are just interested in learning why they are important. Accessorized barrels typically cost over \$100. Town residents pay only \$45 for the barrel, necessary parts, and use of the tools for assembly. Participants will also be guided through the assembly of their own rain barrel and learn how to install it at home. This workshop has been sponsored by the Mountain Lakes Green Team and Environmental Commission.
